# FUNCTIONAL, ATTRACTIVE AND SUSTAINABLE

Since 2003, the naturessse® brand has proved our expertise in the field of innovative and resource-conserving packaging materials.

Whether disposable tableware or food packaging, naturessse® products are the ideal way to create the right setting for culinary pleasures. The range that currently includes more than 300 articles is being constantly expanded and adjusted to the requirements of our customers. You can also receive customised solutions to meet your own specific needs. All naturessse® products meet the food safety norms that are guaranteed by the corresponding certificates. EN 13432 certification additionally confirms biodegradability.

## WHAT DOES NATURESSE® EMBRACE?

The naturessse® brand embraces a range of products made of renewable raw materials. All the materials used are either residual materials from agriculture or based on rapidly renewable resources of plant origin. In this way we protect fossil resources in a sustainable manner by enabling the recycling of valuable residual materials that would otherwise be discarded as waste. Viewed from a life cycle perspective, all the raw materials used are 100% biodegradable and CO<sub>2</sub>-neutral, regardless of whether the products are ultimately disposed of by fermentation, composting or incineration.

# PALM LEAF

## Pure nature

Foliage produces humus and a young plant feeds off humus... and the cycle starts again. The same also applies to the leaves that fall off the betel palm several times a year. But before these turn to humus, we have them collected and used to make disposable tableware. The betel palm is grown in a mixed culture, thereby preserving the soils – and as we are only actually able to use dried-out leaf sheath for our products (green leaves would mould due to their high moisture content), overexploitation is ruled out. As each palm leaf has its own elegant texture, every product made from this is a unique specimen. The other characteristics are also unique: Palm leaf products are versatile, ovenproof, food-safe and fat- and heat-resistant – and all this without any additional coating or additives – in other words, pure nature.

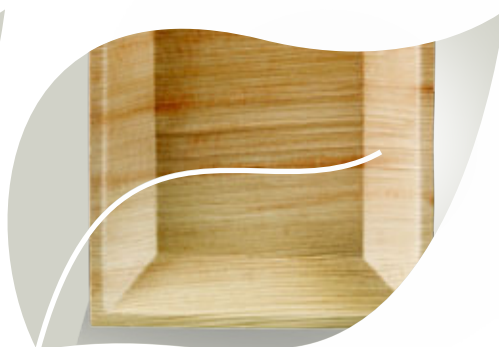

Production in India is carried out under audited and fair conditions and meets high social standards (**certified according to SA 8000**). Our palm leaf products are also certified according to **EN 13432** and since 2015 according to **Nordic Ecolabeling No. 5047 009**.

# SUGAR CANE

## Sweet side effect

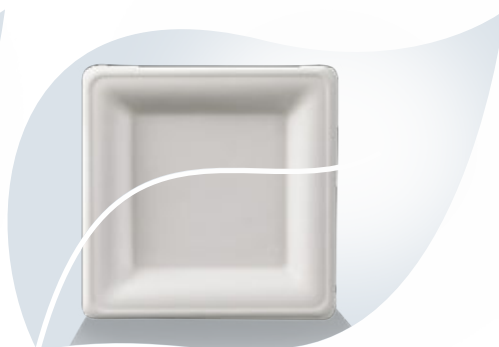

Our craving for sweetness has a healthy side effect: When sugar is extracted from sugar cane, a large quantity of residual fibres is collected. This biomass is far too valuable to be simply burned as has largely been the case until now. Sugar cane fibres can be used to produce elegant and stylish tableware, with endless potential shapes and designs. Tableware made from sugar cane is light in weight yet very stable. It is also water-resistant, suitable for use in the microwave or oven and for hot and cold applications. In order to make the bowls sealable, we also offer bio-lamination with which we achieve a stronger grease and water barrier. Lamination expands the range of possible uses so that sugar cane can also be used for the packaging of take-away menus in our menu trays, for example. Production takes place close to the source of the raw material, thereby avoiding long transportation routes.

# PLA (POLYLACTIC ACID)

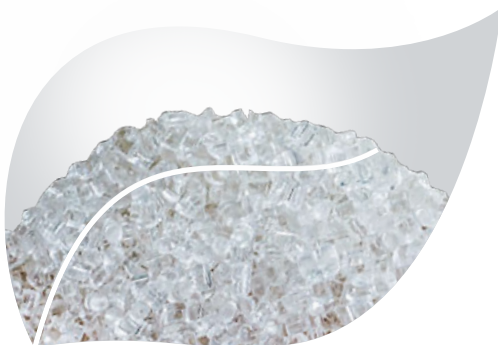

## Lactic acid becomes a plastic

Transparent and 100% natural: Polylactides, commonly also referred to as polylactic acids (PLA), are synthetic polymers belonging to the group of polyesters. They are made up of a large number of lactic acid molecules that are chemically bound together. We make use of lactic acids gained through the fermentation of carbohydrates for the manufacture of naturessse® products. While currently using maize and sugar cane starch for this purpose, we are continuing to explore further. In future it should be possible to produce PLA from starches gained from residual materials.

PLA is a natural alternative to the polyethylenes dependent on mineral oil. It is highly transparent, dimensionally stable and shatterproof. PLA can also be moulded into almost any shape and used as film. Products made of PLA are excellently suited for cold applications up to 40°C. And there is another positive side effect: While displaying an equivalent product stability, items made of PLA are lighter than comparable ones made of conventional materials.

# CPLA (CRYSTALLISED POLYLACTIC ACID)

## Crystallising out the benefits

A newly developed procedure allows PLA to be converted into CPLA (crystallised polylactic acid). The raw material crystallises and the colour becomes milky. CPLA is suitable for warm applications and can withstand temperatures of up to 85°C. This robustness also applies to its shape. Above all, cutlery made of CPLA has an extremely firm consistency. It also convinces with its natural feel. naturessse® CPLA products are made exclusively of pure PLA, i.e. no mixed compounds are used.

# CELLULOSE/WOOD

## FSC® creates trust

To be absolutely sure where the cellulose that we process comes from, we rely on FSC® certification. This guarantees the sustainable management of forests. Among other things, regular thinning is carried out in FSC® forests to create clearances that enable the forest to breathe, grow and ultimately regenerate. Cellulose is the raw material used for the nature-esse® range of cardboard products. An additional PLA layer, such as that used in our paper cups, also makes the products heat- and moisture-resistant. They are individually printable and available in different sizes for a wide range of purposes.

# PAPERWISE

## Cardboard made of residual materials

Two things are produced on farmland: on the one hand food and on the other hand inedible by-products such as stalks and leaves. But just because something is inedible does not make it worthless: Cellulose as an agricultural residue is an excellent raw material for the production of cardboard. And this in turn is ideally suited to food packaging. PaperWise stands for the special procedure by which cardboard is made out of cellulose that is produced, for instance, when sugar cane is cut. We use this to develop our PaperWise take-away range. Each of these products is labelled with the PaperWise logo as a seal of quality.

Agricultural residues e. g. bamboo,

# BAG AND FOIL SOLUTIONS

Our bags and foils made of vegetable oil and starch are breathable, very stable and extremely tear-resistant. We are all familiar with the semi-transparent shopping bags that often end up in the waste after use. Whether chain bags, shirt carrier bags or foils, all our packaging aids are made of vegetable oil or starch (**Mater-Bi**) and after initial use can be reused as green waste bags. All naturessse® bags and foils are certified in accordance with **EN 13432** and additionally recyclable in household compost.

COMPO BOX: ODOURLESS DISPOSAL

Organic kitchen waste quickly starts to smell. This is where our **innovative product solution** comes in. Together with the breathable **Compo Bag** compost bag, the **Compo Box** ensures constant air circulation. As a result it actively prevents unpleasant odours and mildew developing. This solution therefore means you can happily leave your green waste in the Compo Box for up to a whole week.

# VERIFIED QUALITY. SAFE PRODUCTS.

All important features of our products are subjected to testing. We regularly conduct these tests with independent research and certification institutes. We place a particular focus here on the **food safety features** and on residue-free compostability according to **EN 13432** or biodegradability. In addition to the impeccable quality of the products we offer, we also attach great importance to fair working conditions at our local partners' facilities. Compliance with our policy regarding socio-ethical and ecological procurement is checked regularly by the SGS inspection agency. We give preference to suppliers that are certified compliant with **Sedex, SA 8000** or other ethical standards.

We consider it our mission to deliver healthy and safe foods and impeccable food packaging. We strive relentlessly to facilitate the development, production and marketing of consumer-friendly end products for you that meet market requirements. We provide open communication and consultation to increase customer value with a focus on tailor-made solutions. Our employees are aware of the major responsibility they bear and are at your service with their high level of motivation and personal commitment.

# OUR RECIPE IS ENTHUSIASM. SINCE 1935.

Pacovis is a traditional Swiss company that has been one step ahead of the future for over 80 years. Since its founding in 1935, our group of companies has increased in size several times over – with branches in Germany, Austria, Russia, Romania and Turkey, as well as distribution partners throughout Europe.

Our company rests on two main pillars: food solutions and food packaging. In food solutions, the focus is on the high quality of the food, its seasoning, refining and development. And in food packaging it's all about the functional packaging and attractive presentation of food. By concentrating on these two areas we have created unique expertise that is embraced by all 350 of our employees and implemented in pursuit of the best solution for our customers. This expertise allows us to create tailor-made solutions for each customer.

Our success – and therefore also your success – is based on high levels of flexibility, in-depth market knowledge, innovative development and a long-term approach. In addition, our corporate culture is characterised by social and environmental responsibility. With great enthusiasm we put our knowledge and experience to use for you every day. We are your partner – independent and owner-managed.

## **All-round service for events**

Along with structured range and initial stocking, Pacovis AG also makes precise supply and stock management possible for event organisers. It is important for most of today's event organisers to fulfil their environmental responsibilities, including in catering technology, especially when organising large events.

You can count on Pacovis AG around the clock. Pacovis staff can be used at events on request and guarantee that the event will run smoothly.

# SALES PARTNERS

The naturessse® range is represented in virtually all European countries by regional sales partners. Skilled naturessse® partners know the country-specific market and customer requirements better than anyone and offer the best advice. Logistics is another important aspect of the sales partner network. Storage on site is economical and guarantees the shortest delivery times.
